

AHMAD ALTAF

Full Stack Developer | Next.js · TypeScript · PostgreSQL · Android (Kotlin)

Multan, Pakistan • +92 313 6704289 • ahmad.altaf7500@gmail.com

PROFESSIONAL SUMMARY

Full stack developer building and running GMPL 360, an in-house ERP now live in production for a nationwide field-sales operation — a Next.js and TypeScript web system on PostgreSQL, together with its companion native Android app in Kotlin and Jetpack Compose, published on Google Play and used daily by 300+ staff across 38 cities. Also building Pharvizo, an offline-first Pharmacy Management & POS system for medical stores in Pakistan. Work spans relational schema and reporting queries, REST API design, role-based access across ten organisational roles, offline-first mobile and desktop data capture, GPS-verified attendance, and Google Play release management, with a habit of owning a product end to end.

TECHNICAL SKILLS

Programming: TypeScript, JavaScript, Kotlin, Rust, SQL, HTML5, CSS3

Web: Next.js (App Router), React, Node.js, Tailwind CSS, REST API design, middleware routing

Mobile: Android, Kotlin, Jetpack Compose, Material 3, Retrofit, OkHttp, WorkManager, Foreground Services, Google Play Console

Desktop & Offline Systems: Tauri, Rust, SQLite, React/TypeScript, peer-to-peer LAN sync, event-sourced data models

Database: PostgreSQL — schema design, joins and views, aggregate reporting queries, query debugging; SQLite

Auth & Security: JWT, httpOnly cookies, role-based access control, encrypted on-device storage, hardware-bound license activation

Tools & Integration: Git, GitHub, Android Studio, VS Code, pgAdmin, Vercel, Figma, Webhooks, Zapier, Pabbly, GoHighLevel

PROFESSIONAL EXPERIENCE

Global Marks Pvt Ltd — Full Stack Developer

June 2026 – Present

Multan, Pakistan

- Sole developer of GMPL 360, an in-house ERP for field-sales operations — a Next.js (App Router) and TypeScript web platform on PostgreSQL with a companion native Android app, now live in production with 300+ user accounts across ten organisational roles, 38 cities and 308 stores.
- Built 60+ REST API routes and a 13-module admin dashboard covering attendance, sales entry and multi-stage approval, inventory, store assignments, monthly targets, leave and resignation workflows, and salary calculation, with Excel and PDF export.
- Implemented role-based access for Brand Ambassadors, TSE/TSO, Area/Regional/Zonal/National Managers, HR, GM and Admin — JWT issued in httpOnly cookies, with Next.js middleware routing each role to its own dashboard and blocking cross-role access.
- Wrote the reporting layer in PostgreSQL — multi-level manager hierarchies, per-store and per-SKU sales aggregation, and attendance summaries across 300+ employee records — and ported the salary calculation engine from TypeScript to Kotlin, validated field by field so both platforms always produce identical results.
- Built the Android app in Kotlin and Jetpack Compose — GPS-verified shift check-in and check-out, camera capture with on-device image compression, an offline queue that retries automatically once connectivity returns, and all-day location tracking via a foreground service and WorkManager.
- Took the app through Google Play release end to end — data safety declarations, background-location and foreground-service disclosures, an in-app privacy policy and account-deletion flow, and a signed App Bundle — and it is now published and live on Google Play, in daily use by the field team.

Freelance — Web Developer & Integration Specialist

2026 – Present

- Build responsive websites and landing pages, translating Figma designs into accurate, functional pages.
- Integrate web applications with third-party platforms using REST APIs, Zapier and Pabbly, and manage projects end to end from requirements through delivery.

Tech Harborage — GoHighLevel Specialist

2025 – 2026

- Implemented UI from Figma designs and built customised web funnels and landing pages for client products.
- Connected platforms through REST API integrations (Zapier, Pabbly) to automate data flow between systems.
- Configured SaaS accounts and reusable snapshots and templates, improving operational efficiency through reliable, well-structured automated workflows.

SELECTED PROJECTS

Pharvizo — Pharmacy Management & POS System — *Tauri, Rust, React, TypeScript, SQLite*. Offline-first POS and inventory system built as a resalable product for medical stores in Pakistan — peer-to-peer LAN sync between store counters via an event-sourced stock ledger, with no single point of failure. 12+ MVP modules built (POS, batch/expiry tracking, inventory, purchasing, supplier and customer ledgers, returns, reporting) across a 28-module scoped system.

Lead-Capture Landing Page & Automation — *Next.js, REST APIs, Zapier, Pabbly*. Built a high-converting page from a Figma design and wired form submissions to a CRM via webhooks, automating lead routing and follow-up email.

EDUCATION

BS Computer Science — NCBA&E, Multan, Pakistan

2020 – 2024

Languages — English (Fluent) • Urdu (Native)
