SUMMARY

Full stack developer who builds and runs the ERP a 300-person field team clocks into every morning. Next.js, TypeScript and PostgreSQL on the web; React Native and native Android (Kotlin, Jetpack Compose) on mobile; Firebase for real-time and online features. I write the schema, the API routes and the screens that call them, and take products through to store release as the sole engineer.

WORK EXPERIENCE

Full Stack Developer - Global Marks

Jun 2026 - Present

- Sole developer of GMPL 360, an in-house ERP for field-sales operations: a Next.js (App Router) and TypeScript web platform on PostgreSQL with a companion native Android app, supporting 300+ user accounts across ten organisational roles, 38 cities and 308 stores.
- Built 60+ REST API routes and a 13-module admin dashboard covering attendance, sales entry and multi-stage approval, inventory, store assignments, monthly targets, leave and resignation workflows, and salary calculation, with Excel and PDF export.
- Wrote the reporting layer in PostgreSQL: multi-level manager hierarchies, per-store and per-SKU sales aggregation, and attendance summaries. Implemented role-based access with JWT in httpOnly cookies and Next.js middleware routing each role to its own dashboard.
- On Android: GPS-verified shift check-in and check-out, camera capture with on-device image compression, an offline queue that retries automatically, and all-day location tracking via a foreground service and WorkManager.
- Ported the salary engine from TypeScript to Kotlin and validated it field by field against the web result. Took the app through Google Play release (data safety, privacy policy, account-deletion flow, signed App Bundle); now [live on Google Play](#).

Web Developer and Integration Specialist - Freelance

2026 - Present

- Build responsive sites and landing pages in Next.js and React from Figma designs, wired to CRMs and other platforms through REST APIs and webhooks.
- Handle the full cycle: client requirements, build and delivery.

GoHighLevel Specialist - Tech Harborage

2025 - 2026

- Built customised funnels and landing pages for client products from Figma designs, connected platforms through Zapier and Pabbly integrations, and turned repeated work into reusable snapshots and templates.

PRODUCTS AND PROJECTS

Vialio Sort - Liquid Sort-Puzzle Mobile Game

Sole developer | React Native, Firebase (first built in Kotlin / Jetpack Compose) | Pre-release

- Built the core pour and move-validation logic, plus a level generator with a solver that guarantees every level is solvable.
- Designed one rules system driving more than a dozen blocker mechanics, difficulty tiers, boosters, lives and a coin economy; added a journey of episodes, a daily timed challenge and win-streak perks.
- Implemented anonymous sign-in, player sync and weekly / all-time leaderboards on Firestore, protected by Security Rules. Game rules are pure functions covered by unit tests.

Pharvizo - Offline-First Pharmacy Management and POS

Sole developer | Tauri, Rust, React, TypeScript, SQLite | In active development

- Resalable product for medical stores in Pakistan: POS, inventory, khata and licensing, with 12+ MVP modules built.
- SQLite locally with peer-to-peer LAN sync between store counters; no internet required and no single point of failure.

Lead-Capture Landing Page and Automation

Next.js, REST APIs, Zapier, Pabbly

- Built a high-converting page from a Figma design and wired form submissions to a CRM via webhooks, automating lead routing and follow-up email.

Task Manager Web App

Next.js, API Routes, Tailwind CSS

- Full CRUD task manager on Next.js API routes with a component-driven UI, filtering and persistent state.

Food Delivery App

Node.js, Express, MongoDB Atlas, Kotlin, Jetpack Compose

- REST API backend and an Android client using Clean Architecture (MVVM, Hilt, Retrofit).

TECHNICAL SKILLS

- **Web:** Next.js (App Router), React, Node.js, TypeScript, JavaScript, Tailwind CSS, REST API design, middleware routing, HTML5, CSS3
- **Mobile:** React Native, Android, Kotlin, Jetpack Compose, Material 3, Retrofit, OkHttp, WorkManager, Foreground Services, Google Play Console
- **Backend and database:** PostgreSQL (schema design, joins and views, aggregate reporting queries), Firebase (Firestore, Authentication, Security Rules, Analytics, Cloud Functions, Cloud Messaging), MongoDB, SQLite
- **Auth and security:** JWT, httpOnly cookies, role-based access control, encrypted on-device storage
- **Tools and integration:** Git, GitHub, Android Studio, VS Code, pgAdmin, Vercel, Figma, Webhooks, Zapier, Pabbly, GoHighLevel

EDUCATION

BS Computer Science - NCBA&E, Multan, Pakistan | 2020 - 2024

LANGUAGES

English (Fluent) | Urdu (Native)
